FSRS settings card

One setting matters most: desired retention. Everything else follows from honest grading.

What FSRS tracks for each card

- Retrievability: your chance of recalling it right now.
- Stability: how many days until that chance falls to 90%.
- Difficulty: 1 to 10, how hard the card is to strengthen.
- A card is due when its recall chance reaches your target.

Switch it on in Anki

1. Update every device: Anki or AnkiMobile 23.10+, AnkiDroid 2.17+.
2. Deck options, FSRS section at the bottom: turn it on.
3. Keep learning steps under one day, such as 10m or 30m.
4. Press Optimize under FSRS parameters.
5. Set desired retention. Start at 90%.

Which button

- Again: you did not recall it. The only button for a miss.
- Hard: you recalled it, with real effort.
- Good: you recalled it normally.
- Easy: you recalled it instantly.

Days until review, for a card with 10-day stability

- 80% target: about 33 days.
- 85% target: about 19 days.
- 90% target: 10 days.
- 95% target: about 4 days.
- 97% target: about 2 days.

My settings

Deck, desired retention, and the reviews a day you can really keep up with.

Before you change anything

- [ ] I press Again for every card I forgot.
- [ ] I have not edited or copied anyone's parameters.
- [ ] I raise retention only for a deck with an exam close.
- [ ] I can keep up with the daily reviews at this target.
